

# New labels

Field code
No field code

 Write

Additional information for writing values	Adds new <b>labels</b> to the issue 
Valid text input	Comma-separated <b>list of labels</b>
Valid numerical input	Numbers are cast to text
Example input	ui, web_bug

If a label does not exist, it will be created. This field can also be used to add new labels to **linked issues**, **sub-tasks** or issues returned by **JQL** easily.

Alternatively you can use the [Labels](#) field with the additional + prefix.

The main use case for this virtual field is to add a label through the [Update or copy field values](#) post function or the [Update field action](#) without replacing or removing an existing one.
