An issue must have at least 3 resolved Test Cases

On this page

Use case

This use case ensures, that an issue must have **at least three** sub-tasks of type "**Test Case**" which **must all be resolved**.

You can either **hide** the transition using the Condition on sub-tasks or **block** the transition using the Validation of sub-tasks.

⚙️ Configuration

1 Add the **condition** or the **validator** to the desired transition or create a new transition.

2 **Filter by issue type**

Choose the desired **issue type**, e.g. "Test Case"

3 **Filter by resolution**

Choose the desired **resolution(s)**, e.g. "Done"

4 **Minimum number of sub-tasks**

Choose **3**

Additional options

5 **Allow unselected issue types**

Check this option.

> Checking this option ensures that other issue types are **not** being **considered / analyzed** since you only want to analyze Test Cases.

6 **Allow unselected statuses**

Check this option to skip the status filter.

Validator only

1 **Error message**

> You need at least three resolved Test Cases before proceeding with this issue.

Screenshots

Update parameters of the Condition on sub-tasks Condition for this transition.

Update parameters of the Condition on sub-tasks Condition for this transition.

Basic configuration *

Filter by issue type

Sub-task ✕

Only issues matching the selected issue types will be evaluated.

Filter by status

Select statuses

Only issues matching the selected statuses will be evaluated.

Filter by resolution *

Done ✕

Only issues matching the defined resolutions will be evaluated.

Filter by field value

✅ 📋 1

Only issues where the field values match the provided logical expression are allowed.

Minimum number of sub-tasks *

3

Specify the minimum number of sub-tasks that need to satisfy the specified filter criteria.

Maximum number of sub-tasks *

1000

Specify the maximum number of sub-tasks that need to satisfy the specified filter criteria.

Condition on sub-tasks

Documentation 🗗

Evaluate the current state (type, status, number, etc.) of sub-tasks.

Workflow

JWT 3.0.0 Use cases

TO DO

JWT (1471)

IN PROGRESS

Additional options

☑ **Allow unselected issue types**

Sub-tasks of unselected issue types will be allowed regardless of their state. This option must be checked, if the issue type filter should be ignored.

☑ **Allow unselected statuses**

Sub-tasks in unselected statuses will be allowed regardless of their state. This option must be checked, if the status filter should be ignored.

☐ **Allow unselected resolutions**

Sub-tasks with unselected resolutions will be allowed regardless of their state. This option must be checked, if the resolution filter should be ignored.

☐ **Allow unsatisfied field value filter**

Sub-tasks not matching the defined field values will be allowed regardless of their state. This option must be checked, if the field value filter should be ignored.
