Add percentaged profit margin when closing issue

On this page
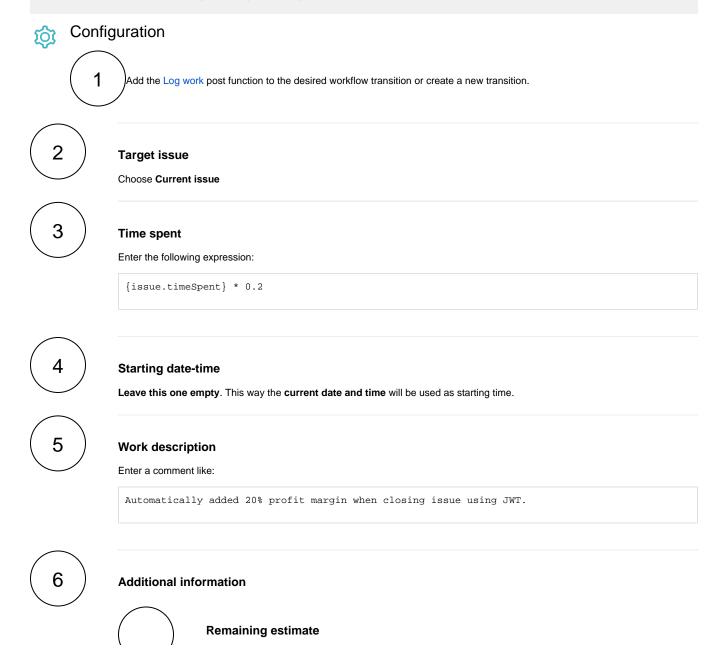

Use case

Using the **time tracking** feature within Jira is a great way to keep on track of your finances.

In the following use case we're going to extend this functionality by **automatically adding a 20% profit margin when a ticket is closed**.

This way this step never gets forgotten again.

⚙️ Configuration

1 Add the Log work post function to the desired workflow transition or create a new transition.

2
Target issue

Choose **Current issue**

3
Time spent

Enter the following expression:

```
{issue.timeSpent} * 0.2
```

4
Starting date-time

Leave this one empty. This way the **current date and time** will be used as starting time.

5
Work description

Enter a comment like:

```
Automatically added 20% profit margin when closing issue using JWT.
```

6
Additional information

Remaining estimate

1 Choose **Retain remaining estimate**

> Select this option, if the profit margin **should not be subtracted from the remaining estimate**. If it should be subtracted from the remaining estimate, select the other option.

Screenshots

Update parameters of the Log work Function for this transition.

Update parameters of the Log work Function for this transition.

Basic configuration *
Define the required parameters needed to execute this post function.

Target issue *

Current issue

Select the issues to log work on.

Time spent *

✔ 123 1 `{issue.timeSpent} * 0.2`

The expression must return the time to be logged in minutes.

Starting date-time

✔ 123 1

The expression must return the starting date-time of the work log entry. In case no expression is entered, current date-time is used.

Work description

✔ {} 1 `Automatically added 20% profit margin when closing issue using JWT.`

Enter plain text and optionally use **field codes**, e.g. %{issue.summary}, to insert field values.

Additional options

Remaining estimate

Retain remaining estimate

> Conditional execution
