

Validate only issue links created in transition screen

On this page

[Configuration](#) | [Screenshots](#) | [Related use cases](#)

Use case

[Validation of linked issues](#) checks all the issue links but if you want to check only those issue links added to the transition screen, use the [Logical validator](#) with the configuration below.

Configuration

1

Add the [Logical validator](#) to the desired workflow transition.

2

Expression

Add the following expression:

```
count(transitionLinkedIssues("")) >= 1 AND count(filterByProject(filterByIssueType(transitionLinkedIssues("duplicates"), "Improvement, Bug"), %{issue.project.key})) = count(transitionLinkedIssues(""))
```

This expression checks the following:

- **At least one** issue needs to be linked during the transition
- The issues are being linked by the **link type** "duplicates"
- All issues linked within the transition must be of type **Improvement or Bug** and must be in the **current project**

Screenshots

[Update parameters of the 'Logical validator' Validator for this transition.](#)

Update parameters of the 'Logical validator' Validator for this transition.

Basic configuration *

Define the required parameters for this validator.

Expression *

```
1 count(transitionLinkedIssues("")) >= 1 AND  
count(filterByProject(filterByIssueType(transitionLinkedIssues("duplicates"), "Improvement, Bug"), ${issue.project.key})) =  
count(transitionLinkedIssues(""))
```

The expression must return **true** or **false**. The condition is met if the **logical expression** returns **true**.

- Validation options
- Error message

Logical validator

[Documentation](#)

Evaluate a logical expression that returns true or false - a most universal and powerful function to compare field values across any kind of issue relation, count sub-tasks or links.
