End of sales server products by Atlassian

Dear customers,

Atlassian announced on October 16th, 2020 to accelerate the journey into the Cloud (https://www.atlassian.com/blog/announcements/journey-to-cloud). That strategic decision, to end the sale of server licenses, leaves all current server customers with the question on how to proceed with their investment into the Atlassian tool suite.

As an Atlassian Solution and Marketplace partner we were aware of the general direction Atlassian was heading and started to invest in our Cloud offerings years ago. Provided the given timeline of Atlassian's end of sale strategy we will continue and also massively accelerate our own Cloud journey.

As part of this process, we will do our best to provide potential migration paths and transparent roadmaps of our app development plans for you to proactively react to the changing circumstances.

This page should help you to get a brief overview about the current state of our xApps in relation to the various hosting options that are being supported.

Server

We will continue to offer support for our server apps until the end of Atlassian's support period in 2024. Since Data Center and server products are currently being developed together, you can even expect **new features** to be shipped for server products in the years to come.

Data Center

If you're planning to migrate to Data Center, you're all set . Just acquire the corresponding Data Center license for the app(s) of interest and update the license key in the UPM. No further actions are required. Contact our sales department through our Service Desk for potential deals, app bundles or discounts to smoothen your transition from server to Data Center.

Make sure to read up on the official information regarding Data Center approved apps: https://www.atlassian.com/licensing/data-center-approved-apps

Cloud

Over the past year we have invested into bringing our flagship products JWT to the Cloud. In the months and years to come we will continue our investment and dedication to evaluate every single app and feature and the respective potential for the Cloud. We are aware that the technical capabilities of cloud and server products vary, leaving a gap in functionality. Our goal is to close this gap over time and achieve **value parity** between our server / Data Center and cloud apps.

If you are planning to migrate to Cloud, you should be aware of the **differences** between the Server and Cloud variants of our apps listed below on this page. If you are still having questions afterwards or if you miss a specific feature that blocks you from migrating to the Cloud, please don't hesitate to reach out to us through our support portal: https://support.decadis.net/plugins/servlet/desk.

We are fully committed to support you on your way into the future - whether it might be cloud or Data Center.
