Validators

Validators are used to guarantee **accuracy** of **existing issue data** or data **entered** on a **transition screen** before a transition is executed.

≡ Available validators

Jump right in and configure any of the available validators listed below. Each validator comes with built-in examples.

If you are just looking for some **inspiration**, head over to our large use case library and check out our Workflow use cases!

Validator	Short description	Label
Compare two values validator	**Evaluate** the comparison of **two** (field) **values**.	STAFF PICK
Fields required or changed	Check if fields are **set/empty** or **have/haven't changed** on the transition screen.	STAFF PICK
Logical validator	Evaluate a **logical expression** that returns `true` or `false`.	STAFF PICK
Users are/aren't in project role (validator)	Evaluate whether users are **members** of given **project roles**.	
Validation based on JQL query	Validate the current issue against the result of a **JQL query**.	STAFF PICK
Validation based on regular expression	Evaluate (field) **values** against a **regular expression**.	
Validation of JWT project property	Checks the value of a project property in project's description.	
Validation of linked issues	Evaluate the current **state** (type, status, number, etc.) of **issue links**.	
Validation of sub-tasks	Evaluate the **current state** (type, status, number, etc.) of **sub-tasks**.
