

Difference between the current date and the earliest due date

Use case

This calculated field returns the **difference** between the **current date** and the **earliest due date** among the issue's sub-tasks.

Configuration

1

Create a new **Calculated Number Field (by JWT)** custom field and name it properly.

Providing a description will help you to identify what the custom field does but this step is **optional**

2

Parser expression

Add the following parser expression:

Math expression for Calculated number field:

```
min(fieldValue({issue.dueDate},subtasks())) - {system.currentDateTime}
```

3

Display format

1

Content type

Choose **Duration**

2

Duration display format

Choose **Long**

more info...

For this use case the format **duration** was chosen since the numeric value is being calculated, a number of milliseconds represents a time duration.

This way the value is represented like **2d 9h 43m** instead of a single number.

Check the parameter **Use time tracking settings**

more info...

By checking this parameter, the duration will be based on the number of **working hours** per day, and the number of **working days** per week as configured in [time tracking](#), instead of 24 hours per day and 7 days per week.

4

Add the field to the relevant view **screens**.

Remember: All calculated fields are **read-only** and cannot be manually updated on a create or edit screen.

5

Check the results

Once configured and added to an issue screen, the result will look like this:

[Default Configuration Scheme for JWT calculated field](#)

Default configuration scheme generated by Jira

Applicable contexts for scheme: [Edit Configuration](#)

Issue type(s):

Global (all issues)

Expression:

```
✓ 123 min(fieldValue({issue.dueDate}, subtasks())) - {system.currentDateTime}
```

[Edit expression](#)

Display format: **Duration with long** format.

Time tracking settings will be used:

- Work day: **8** hours
- Work week: **5** days

[Edit display format](#)
