

Predicted resolution date based on business hours

Use case

This calculated field will return the **predicted resolution date** of the **issue** by adding the remaining estimate to the current date and taking business hours into consideration.

To achieve this, a **calendar** is used to specify the actual business hours.

Configuration

1

Create a new **Calculated Date-Time Field (by JWT)** custom field and name it appropriately.

Providing a description will help you to identify **what** the custom field does, but this step is **optional**.

2

Parser expression

Add the following expression:

Date/Time expression for Calculated date/time field:

```
{issue.remainingEstimate} != null ? addTime({system.currentDateTime},{issue.remainingEstimate} * {MINUTE}), "working-hours", LOCAL) : null
```

more info...

working-hours is the **JWT calendar** used to specify the actual business hours. In this example we will assume a simple eight-hour working day:

Calendar expression for 'working-hours':

```
MON-FRI {  
  08:00-17:00;  
}
```

3

Display Format

1

Format type

Choose **Date Time Picker**

4

Add the field to the relevant view **screens**.

Remember: All calculated fields are **read-only** and cannot be manually updated on a create or edit screen.

5

Check the results

Once configured and added to an issue screen (e.g. for all stories), the result will look like this:

Default Configuration Scheme for JWT calculated field

Default configuration scheme generated by Jira

Applicable contexts for scheme: [Edit Configuration](#)

Issue type(s):

Global (all issues)

Expression:

```
{issue.remainingEstimate} != null ?  
addTime({system.currentDateTime}, ({issue.remainingEstimate} * {MINUTE}), "working-hours", LOCAL) : null
```

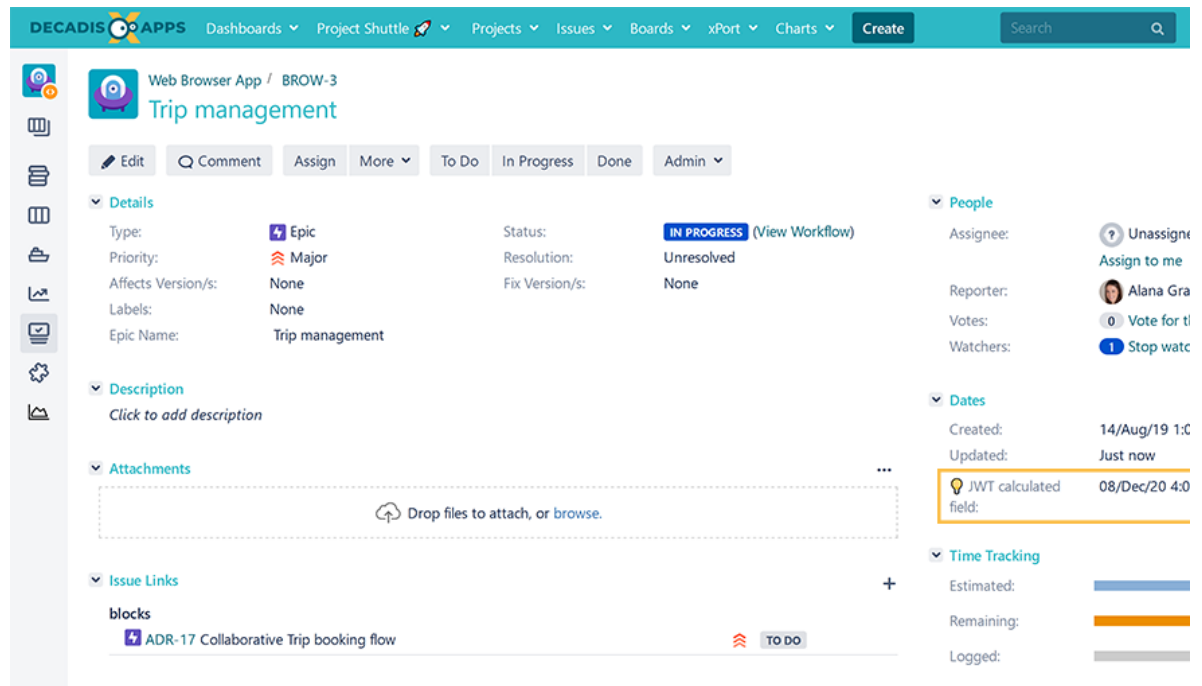

[Edit expression](#)

Display format: Format: **Date time picker**

Example: 25/Nov/20 8:56 PM

Timezone: **Server timezone**
