

# leastBusyUserInRole()

This function returns the **name** of the **user** in a given **project role** (in the current issue's project) with the lowest number of **unresolved issues**.

An empty text "" will be returned if there is no user in the project role.

Multiple project roles can be specified in a comma-separated list of project role names, returning the least busy users among the project roles.

## Syntax

```
leastBusyUserInRole(projectRole) #Output: Text
```

## Examples

Parser expression	Description
<pre>leastBusyUserInRole ("Developers")</pre>	This example returns the user among all users of the <b>Developers</b> project role in the current project with the <b>lowest</b> number of unresolved issues across all Jira projects, e.g.: <b>admin.istrator</b>

## Additional information

Parameters used in this function

Parameter	Input (data type)	Description
projectRole	TEXT	Text containing a valid project role name. Multiple project roles can be specified in a comma-separated list of project role names.

## Output

This function returns a TEXT

Variant where you can additionally define a specific **project key**.

## Syntax

```
leastBusyUserInRole(projectRole, projectKey) #Output: Text
```

## Examples

Parser expression	Description
<code>leastBusyUserInRole( "Developers", "CRM" )</code>	This example returns the user among all users of the <b>Developers</b> project role in the <b>CRM project</b> with the <b>lowest</b> number of unresolved issues <b>across all Jira projects</b> , e.g.: <b>admin.istrator</b>

## Additional information

Parameters used in this function

Parameter	Input (data type)	Description
projectRole	TEXT	Text containing a valid project role name. Multiple project roles can be specified in a comma-separated list of project role names.
projectKey	TEXT	Text containing a valid project key.

## Output

This function returns a

TEXT

Variant where you can additionally define a specific **JQL query** to limit the scope of unresolved issues.

### Syntax

```
leastBusyUserInRole(projectRole, projectKey, jqqlQuery) #Output: Text
```

## Examples

Parser expression	Description
<code>leastBusyUserInRole( "Developers", \${issue.project.key}, "type = Bug" )</code>	This example returns the name of the user, who is a member of the current issues' project role <b>Developers</b> and has the lowest number of <b>unresolved Bugs</b> assigned across all Jira projects, e.g.: <b>admin.istrator</b>
<code>leastBusyUserInRole( "Projektmitarbeiter (intern)", \${issue.project.key}, "project =" + \${issue.project.key} )</code>	This example returns the name of the user, who is a member of the current issues' project role <b>Developers</b> and has the lowest number of <b>unresolved issue</b> assigned in the <b>current Jira project</b> , e.g.: <b>admin.istrator</b>

## Additional information

Parameters used in this function

Parameter	Input (data type)	Description
projectRole	TEXT	Text containing a valid project role name. Multiple project roles can be specified in a comma-separated list of project role names.
projectKey	TEXT	Text containing a valid project key.
jqlQuery	TEXT	Text containing a valid JQL query.

## Output

This function returns a TEXT

This function is useful if you want to **automatically assign** issues to the least busy user using a post function or automation rule, e.g.:

- [Assign issue action](#)
- [Update or copy field values](#)

## Use cases and examples

### Use case
