

Status and assignee of parent issue

Use case

This calculated field returns the **status of the parent** and **the user** that it is **assigned to**.

Configuration

1

Create a new **Calculated Text Field (by JWT)** custom field and name it properly.

Providing a description will help you to identify what the custom field does but this step is **optional**

2

Parsing mode

Select **Basic text** as parsing mode.

3

Parser expression

Add the following expression:

Text to be parsed for calculated text field:

```
{parent.status} - {parent.assignee}
```

4

Add the field to the relevant view **screens**.

Remember: All calculated fields are **read-only** and cannot be manually updated on a create or edit screen.

5

Check the results

Once configured and added to an issue screen, the result will look like this:

Default Configuration Scheme for JWT calculated field

Default configuration scheme generated by Jira

Applicable contexts for scheme: [Edit Configuration](#)

Issue type(s):
Global (all issues)

Expression:   `{parent.status} - {parent.assignee}`

[Edit expression](#)

Mode: Basic text
