Last commenter's full name

Use case

This calculated field returns the **user** who wrote the **most recent comment** in a **text field**.

⚙️ Configuration

1 Create a new **Calculated Text Field (by JWT)** custom field and name it properly.

> Providing a description will help you to identify what the custom field does but this step is **optional.**

2 **Parsing mode**

Select **Advanced text** as parsing mode.

3 **Parser expression**

Add the following expression:

Text to be parsed for Calculated Text Field:
userFullName(%{issue.lastComment.author})

4 **Add** the field to the relevant view **screens.**

> **Remember**: All calculated fields are **read-only** and cannot be manually updated on a create or edit screen.

5 **Check the results**

Once configured and added to an issue screen, the result will look like this:

Default Configuration Scheme for 💡 JWT calculated field
Default configuration scheme generated by Jira

Applicable contexts for scheme: Edit Configuration
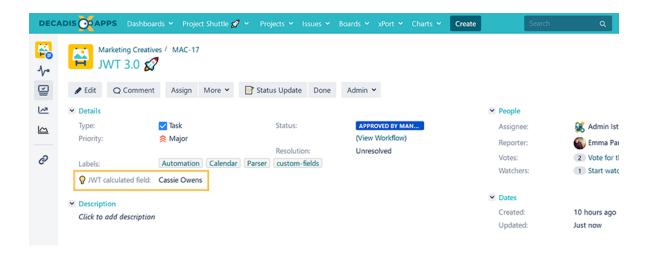

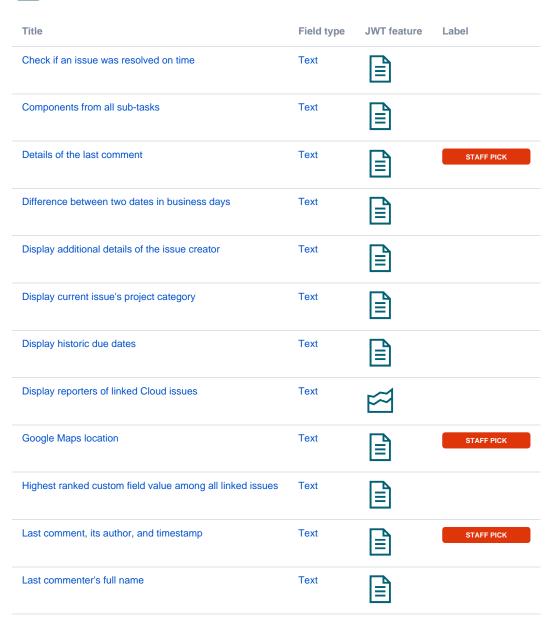

Issue type(s):
Global (all issues)

Expression:

✅ 🔢 userFullName(%{issue.lastComment.author})

Edit expression

Mode: Advanced text
