Purpose

This post-function allows create automatic work logs when triggering transitions. Math expressions as complex as needed can be used to calculate the time to be logged, and custom parsed texts can be used for the comment.

SINCE VERSION 2.4.8

In version 2.4.8 the ability to [select a target issue](#), where the time should be logged, has been introduced.

Example: Add percentaged profit margin on issue closing

This configuration example shows how to add an automatic 20% profit margin in your issues when closing them:

Worklog author:	Assignee - [User] ?	
Remaining estimate adjustment:	☒ Auto adjustment ☐ Retain remaining estimate	
Time to be logged (minutes): Syntax Specification	1 {00025} * 0.2 Numeric/Date-Time field code injector: Original estimate (minutes) - [Number] - {00068}	[Line 1 / Col 14] Check Syntax
Starting Date-Time: Syntax Specification	1 Numeric/Date-Time field code injector: Original estimate (minutes) - [Number] - {00068}	[Line 1 / Col 1] Check Syntax
Log comment:	1 Automatic addition of 20% profit maging when closing the issue. Field code injector: Summary - [Text] - %{00000}	
Conditional execution: Optional boolean expression that should be satisfied in order to actually execute the post-function. (Syntax Specification)	1 Leave the field empty for executing the post-function unconditionally. Collection of Examples Logical connectives: and, or and not. Alternatively you can also use &, and !. Comparison operators: =, !=, >, >=, < and <=. Operators in, not in, any in, none in, ~ and !=~ can be used with strings, multi-valued fields and lists. Logical literals: true and false. Literal null is used with = and != to check whether a field is initialized, e.g. {00012} != null checks whether Due Date is initialized. <u>String Field Code Injector:</u> Summary - [Text] - %{00000} <u>Numeric/Date Field Code Injector:</u> Original estimate (minutes) - [Number] - {00068}	

Note that:

- {00025} is field code for "Total time spent (minutes)"

Once configured, your "Close Issue" transition looks like this:
