

Deprecated functions

JWT functions are constantly being improved. In this process, the set of available functions is also constantly monitored and their customer impact evaluated.

In this process JWT functions might get **deprecated**. Deprecated functions, as of today, **continue to work** but **cannot be selected anymore**. Existing deprecated functions can, however, be **updated**.

It is **highly recommended** to **replace** deprecated functions alternative functions. Alternatives are listed on the dedicated function overview pages.

If you still want to re-configure a deprecated function, you can set the appropriate setting in the [xApps library](#) configuration to **disable** the hiding of deprecated functions.

Conditions

Condition	Short description	Deprecated since
Condition on a list of issue keys	Evaluate the current state (type, status, number, etc.) of issues stored in an issue field .	3.0

Validators

Validator	Short description	Deprecated since
Validation on a list of issue keys	Evaluate the current state (type, status, number, etc.) of issues stored in an issue field .	3.0

Post functions

Post function	Short description	Deprecated since
Clone issue link	Import issue links from a cloned issue .	3.0
Copy a parsed text to a field	Compose a free text involving fixed strings , custom field values and many, many Jira native fields.	3.0
Copy or add custom field value to issue description	Copy the value of a custom field into issue description .	3.0
Inhibit ephemeral fields' auto-clearance	Skip to delete the values of temporary fields after the transition.	3.0
Mathematical or date-time expression calculator	Post function for making complex mathematical and temporal calculations , storing the result in a numeric or date-time field.	3.0
Set issue reporter to current user	Set the current user as reporter of the issue.	3.0

Are you struggling with the question of **whether or where those deprecated functions are being used**? Have a look at the [Workflow report](#) of our app [Admin Toolbox for Jira](#) .

Use the following search terms to look for the usage of the corresponding functions:

Workflow function	Search term
Condition on a list of issue keys	com.fca.jira.plugins.workflowToolbox.workflow-toolboxany-issue-condition
Validation on a list of issue keys	com.fca.jira.plugins.workflowToolbox.workflow-toolboxany-issue-validator
Clone issue link	com.fca.jira.plugins.workflowToolbox.workflow-toolboxclone-issue-links
Copy a parsed text to a field	com.fca.jira.plugins.workflowToolbox.workflow-toolboxcopy-parsed-text-function
Copy or add custom field value to issue description	com.fca.jira.plugins.workflowToolbox.workflow-toolboxcopy-to-issue-description-function
Inhibit ephemeral fields' auto-clearance	com.fca.jira.plugins.workflowToolbox.workflow-toolboxinhibit-ephemeral-field-erasure
Mathematical or date-time expression calculator	com.fca.jira.plugins.workflowToolbox.workflow-toolboxmath-calculator-function
Set issue reporter to current user	com.fca.jira.plugins.workflowToolbox.workflow-toolboxset-reporter-from-current-user-function
