JWT release notes 3.0.1

Release date	02 Feb 2021
Release type	FEATURES MAINTENANCE
Highlights	Maintenance release

New features

- New field code and parser function to return an issue's **project type**
- New parser function to return a **user key**

Improvements

- Extended **performance** and special character support for the **Update field based on rules** post function
- Better handling of small values within Calculated Number Fields with "Hide the field from the issue view if the value is zero" enabled
- Added a **warning message** when testing expressions containing **transition based field codes** like %{issue.transition.comment}

Bug fixes

- The datePart() function did not consider the timezone parameter
- The time zone constants LOCAL and SERVER_LOCAL used the system's timezone instead of JIRA's default timezone
- Field codes containing date values returned the configured date picker format instead of the default JQL format when used within a JQL function
- The current user field code returned the user key instead of the username
- The getNumber() function caused an error when trying to read a variable without a value
- Insight's deprecated fields could not be updated anymore after updating to Insight 8.4.0+
- Field option or component names containing commas or dashes were not evaluated correctly
- Customer request type was not set correctly when being selected via drop-down
- Configured transition names containing special characters were not preselected when editing a Transition issue post function
- E-mail validation didn't allow to define multiple e-mail addresses within the Send email post function
- Single-select custom fields could not be set within the Create issue action
- The Update field action could not be edited having an expression configured
