

Quick access to the create transition

Often you find yourself in the situation that you want to **edit the create transition** of a workflow (e.g. when using our app [Jira Workflow Toolbox](#), to add additional post functions).

It is easier said than done: When **editing a workflow**, it opens up in the **text view** - here the create transition is usually **not available**. Therefore, you would have to **switch to the diagram view** in order to start configuring the create transition.

✓ But with the help of Admin Toolbox, the **create transition is now also available in the text view** - no need to do extra clicks!

Workflows

FPR: Process Management Workflow  INACTIVE
