

Fields required (use cases)

The [Fields required condition](#) checks if **fields** are **set/empty**.

Use cases and examples

Use case	JWT feature	Workflow function	Use case description	Complexity
Check for at least one component		Fields required Fields required or changed	Require a at least one component . This use case is valid for both conditions and validators . The only difference is that you can specify an additional error message when using a validator.	BEGINNER
Make the assignee required		Fields required Fields required or changed	Require a non empty assignee . This use case is valid for both conditions and validators . The only difference is that you can specify an additional error message when using a validator.	BEGINNER
Resolution must be empty		Fields required Fields required or changed	Not allow a resolution to be set. This use case is valid for both conditions and validators . The only difference is that you can specify an additional error message when using a validator.	BEGINNER
