

Block an Epic's transition until all the issues under that Epic are resolved

On this page

[Configuration](#) | [Screenshots](#) | [Related use cases](#)

Use case

In the following use case, we will be able to **transition an Epic** only **when every issue under that Epic is resolved**. If that condition is met, the validator will allow us to transition the Epic.

Configuration

1

Add the [Logical validator](#) to the desired transition.

2

Expression

Enter the following parser expression

```
%{issue.issueType} = "Epic" IMPLIES count(filterByResolution(issuesUnderEpic(), "")) = 0
```

Add Parameters To Validator

Add required parameters to the Validator.

Basic configuration *

Define the required parameters for this validator.

Expression *

```
1 %{issue.issueType} = "Epic" IMPLIES count(filterByResolution(issuesUnderEpic(), "")) = 0
```

The expression must return true or false. The condition is met if the [logical expression](#) returns true.

> Error message

[Add](#) [Cancel](#)

Logical validator

[Documentation](#)

Evaluate a logical expression that returns true false - a most universal and powerful function compare field values across any kind of issue relation, count sub-tasks or links.

Workflow

Software Simplified Workflow for Project EP
