

# Dashboard gadgets

xCharts gadgets can be used for displaying **created charts** directly on your **dashboard** with no need for heading over to the xCharts configuration.

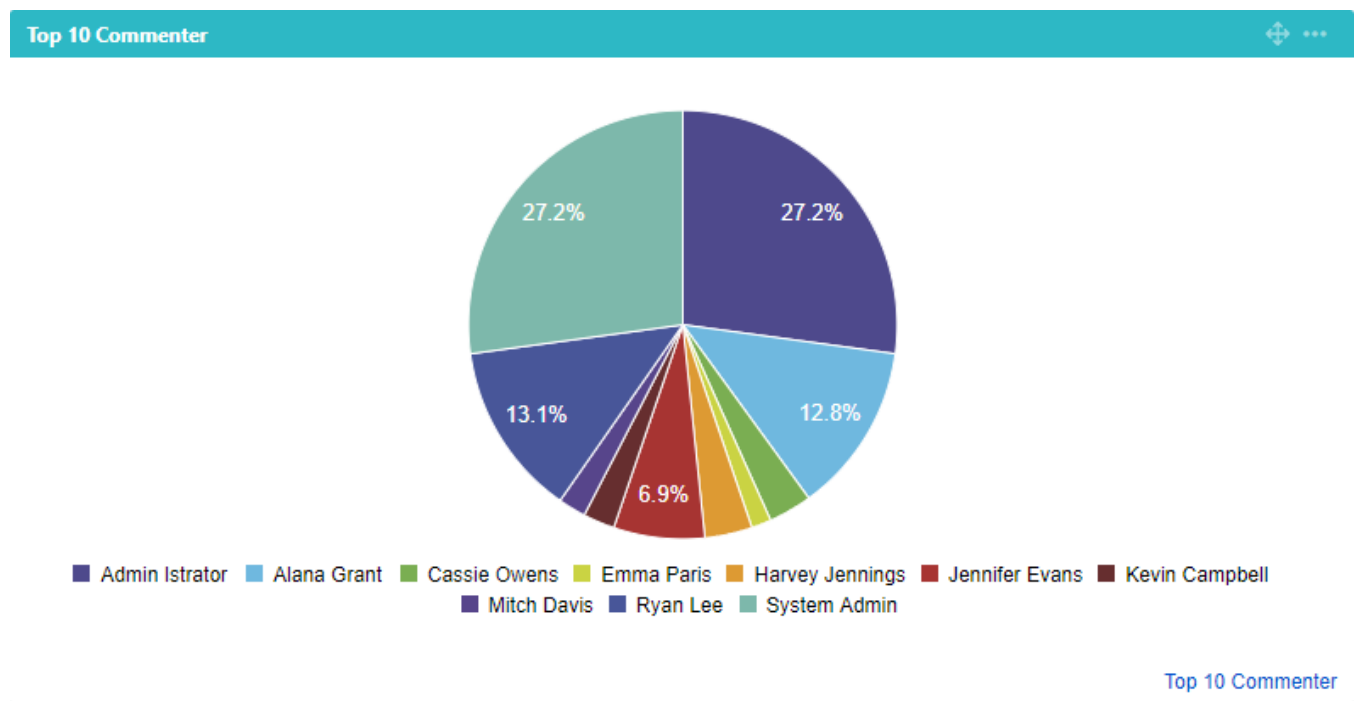

Currently, there are two gadgets available within xCharts:

1. **xCharts gadget**: Displays charts with no further configuration on the dashboard.
2. **xChart gadget+**: When enabled, charts can be directly configured on the dashboard via **live configuration parameters**.

A glance at the gadgets:

## xChart gadget

The **xCharts gadget** ([link](#)) displays the charts and reports with the possibility to set a refresh interval and change the background color:

## xCharts gadget+

**SINCE VERSION 1.7.0**, the **xCharts gadget+** ([link](#)) can be adapted right on the dashboard using **live configuration parameters**:

Your browser does not support the HTML5 video element

Currently, only the xCharts gadget can be used within Confluence.

If you still have questions, feel free to refer to our [support](#) team.
