# issuesUnder()

This function returns an **issue list** containing the children issues located in the level just under **current issue** according to **Advanced Roadmaps hierarchy**.

Advanced Roadmaps hierarchy includes:

- Issues linked by **Parent Link** custom field.
- Issues linked by **Epic-Story** link.
- **Sub-tasks** in the **lowest level** of the hierarchy. Sub-tasks under issues in intermediate levels of the hierarchy are not considered to belong to **Advanced Roadmaps hierarchy.**

Example:

Syntax
issuesUnder() #Output: Issue list

Examples

Parser expression	Description
issuesUnder()	Considering that current issue is *JWT-1*, this expression returns all issues in the level just under it: **JWT-3, JWT-8**

Output

This function returns an ☐ ISSUE LIST

Variant where you additionally can define **issues**.

Duplicated issues are filtered from the output.

Syntax

```
issuesUnder(issueList) #Output: Issue list
```

Examples

Parser expression	Description
`issuesUnder(linkedIssues ("is blocked by"))`	Assuming that expression `linkedIssues("is blocked by")` returns `[JWT-3, JWT-4]`, this example returns all the issues in the level just under issues *JWT-3* and *JWT-4*: **JWT-2, JWT-11, JWT-6, JWT-10** To achieve this the following functions are used: • linkedIssues()

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
`issueList`	**ISSUE LIST**	Any given issue list. Usually this value is retrieved from a function (e.g. linkedIssues() or issuesUnderEpic()).

Output

This function returns an **ISSUE LIST**

Variant where you define **issue keys** instead.

Duplicated issues are filtered from the output.

Syntax

```
issuesUnder(issueKeys) #Output: Issue list
```

Examples

Parser expression	Description
`issuesUnder("JWT-3, JWT-8")`	This example returns all issues in the level just under issues *JWT-3* and *JWT-8*: **JWT-2, JWT-11, JWT-9, JWT-16**

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
issueKeys	TEXT	A comma separated list of issue keys.

Output

This function returns an ISSUE LIST

To return **all issues under an** issue within the Advanced Roadmaps hierarchy, you might want to have a look into the allIssuesUnder() function.

To return **all issues having the same parent** within the Advanced Roadmaps hierarchy, you might want to have a look into the siblingIssues() function.

To return **the parent of an issue** within the Advanced Roadmaps hierarchy, you might want to have a look into the parent() function.

To return **all issues above an issue** within the Advanced Roadmaps hierarchy, you might want to have a look into the issuesAbove() function.
