## **Bulk actions**

Many of the actions you can perform on individual pages or spaces are available as bulk actions.

Simply browse to the space navigator and **select** multiple pages or spaces as if you were selecting multiple files or folders in a file explorer.

- Windows users: hold the CTRL key and select the entities
- Mac users: hold the command (cmd) key and select the desired entities.

After selecting the entities, right-click on one of the selected items and you will see all available bulk actions.

Select a single entity and hold the shift key while selecting another entity for a quicker selection of all spaces or pages in between.

## Bulk page actions Bulk space actions

Performing bulk actions on spaces take will **take a bit longer** since these operations are quite resource-intensive. The overall duration depends on the actual content that is being processed (number of pages, attachments, etc.).
