# Move page

Moving pages has never been easier. Either use the move action or drag & drop pages across **page trees** - and **across spaces**!

You can also move multiple pages at once using the Bulk move pages action.

## The move page action

Your browser does not support the HTML5 video element

**1**     **Right-click** on the desired page or **hover** over the page and click on the **ellipsis** menu "**...**"

**2**     Select the **Move** action.

**3**     Select the **target space**.

**4**     Define a **reference page**.

The reference page indicates the relative target location of the page you want to move. The **positioning options** (next step) will define its final location.

**5**     Define the final location of the page you want to move relative to the defined **reference page**. Select among these options:

| Option | Description |
|---|---|
| **Insert as a child page** | The moved page will be inserted as a **child page of the reference page**. |
| **Insert on the same hierarchy level after reference page** | The moved page will be inserted directly **after the reference page** on the same hierarchy level.. |
| **Insert on the same hierarchy level before reference page** | The moved page will be inserted directly **before the reference page** on the same hierarchy level.. |

**6**     Click on **Move**.

# Drag & drop

As simple as it sounds! Drag & drop pages to **move** or **reorder** them.

You can even drag & drop pages **across spaces**!

Your browser does not support the HTML5 video element

1   **Left-click** on the page you want to move.

2   **Hold**

3   **Drag**

4   **Drop**
