

Bulk page actions

Many of the actions you can perform on individual pages, you can also perform on **multiple pages at once** using **bulk actions**.

Simply browse to the [space navigator](#) and **select** multiple pages as if you were selecting multiple files in a file explorer.

- **Windows** users: hold the **CTRL** key and select the entities
- **Mac** users: hold the **command (cmd)** key and select the desired entities.

After selecting the pages, right-click on one of the selected items and you will see all available bulk actions.

Select a **single** page and **hold the shift key** while selecting another page for a quicker selection of all pages in between.

If you still have questions, feel free to refer to our [support](#) team.
