

# month()

This function returns the **month** part of a timestamp based on a given **time zone** (represented by a number from 1 to 12).

## Syntax

```
month(timestamp, timeZone) #Output: Number
```

## Examples

Parser expression	Description
<code>month({issue.created}, LOCAL)</code>	<p>This example returns the <b>month</b> of the <b>issue creation date</b> as a number.</p> <p>Given an issue that was created on <b>March 25th, 2020 23:15:30</b>, the returned value is 3.</p>

## Additional information

Parameters used in this function

Parameter	Input (data type)	Description
timestamp	NUMBER	The parameter must be valid <b>timestamp</b> . Usually this value is retrieved from a <a href="#">field</a> (e.g. due date, created date).
timeZone	TIMEZONE	The <b>time zone</b> used for the calculation.

## Output

This function returns a

NUMBER
