Highlights

Seamless integration with Tempo time management

Timesheet Check builds on and only works with **Tempo Timesheets** which ships all the features to successfully track **working times**, **breaks**, **holidays** and **non-working days**.

It leverages the data tracked in Tempo Timesheets, including Tempo Team memberships, and takes it to a new level by adding a **layer of checks** to ensure the data is **compliant** with working **laws or internal guidelines*** - for individuals or entire teams.

Rules - the equivalent to regulations, laws and guidelines

Timesheet Check comes with basic metrics like **length of working days** or **d** aily rest periods to get started right away.

Based on these metrics, Rules are set up and ready to go in minutes to map any regulations or internal company policies.*

Check out the Preset rules which are shipped out of the box.

Reports - where rules and timesheets come together

Reports are the connection between rules and timesheets.

All rules defined in a report will be checked against the selected timesheets to **instantly** show you whether a timesheet has **passed** or **failed** the checks. If checks fail, you will get details on the **when** and **why**.

Global settings

Working times and **data protection** need to go hand in hand. Timesheet Check comes with a dedicated permission management to ensure that **only the right people** have **access** to the **right reports**.
