year()

This function returns the year part of a timestamp based on a given time zone.

Syntax year(timestamp, timeZone) #Output: Number

Examples

Parser expression	Description
<pre>%{year({issue.created}, RUN_AS_LOCAL)}</pre>	This example returns the year part of the issue creation date If the issue was created on March 25th, 2020 23:15:30 the output would be 2020 .
%{year(stringToDate("2020-01-01 00:30","Europe /Berlin"),"UTC")}	This example returns the year part of the given date , the timezone is UTC . Due to the time zone UTC , the output will be 2019 .

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
timestamp	NUMBER	The parameter must be valid timestamp . Usually this value is retrieved from a field (e.g. due date, created date).
timeZone	TEXT	The time zone used for the calculation.

Work days might depend on the time zone - it might be Dec 31st on the west coast of the US while at the same time it's already Monday Jan 1st in Australia.

Output

This function returns a NUMBER
