Last Log for Jira Cloud

Due to the substantial differences and the corresponding technical restrictions, we generally do not have access to the logs in the context of Atlassian's Cloud applications.

Neither in relation to the main products such as Jira and Confluence, nor to the apps available on the Atlassian Marketplace.

For the latter, some vendors provide their own logging options, as we do, for example, with our **Audit log** for our workflow app **Jira Workflow Toolbox for Jira Cloud**.

Therefore, LastLog will not be available in the Cloud in the foreseeable future.

If you still have questions, feel free to refer to our support team.
