

# projectsWhereNumberProperty()

This JQL function returns projects with specific properties containing a **numeric** value.

### Syntax

```
projectsWhereNumberProperty(propertyName, operator, number) #Output: Text list
```

### Examples

Parser expression	Description
<pre>project in projectsWhereNumberProperty ("maximumNumberOfTryOuts", "&gt;", 3)</pre>	This example returns a list of projects where the property called <b>maximumNumberOfTryOuts</b> is <b>bigger than 3</b> , e.g. text { <b>maximumNumberOfTryOuts=5</b> } is present in the project's description.
<pre>project in projectsWhereNumberProperty ("numberOfLevels", "=", 5)</pre>	This example returns a list of projects where the property called <b>numberOfLevels</b> is <b>equal to 5</b> , e.g. text { <b>numberOfLevels=5</b> } is present in the project's description.

### Additional information

Parameters used in this function

Parameter	Input (data type)	Description
propertyName	<input type="text" value="TEXT"/>	The name of a project property containing a numeric value.
operator	<input type="text" value="TEXT"/>	A valid comparison operator.
number	<input type="text" value="NUMBER"/>	The number to be compared with the value stored in the project property.

### Output

This function returns a .

The result is **not what you expected**? The number of returned issues feels **too low**?

By default, the **maximum number** of issues that will be returned by the JQL subquery, and thus can be processed by the logical expression is **1 000**.

To ensure the performance of your entire Jira instance, we limit the execution of the JQL function in terms of **issue count** and **execution time**. Please refer to your admin if you need to change the [configuration](#).
