

# Date and time of creation

Field code

`%{issue.created}`

Read

|                  |                                   |
|------------------|-----------------------------------|
| Returned value   | Date and time of issue creation   |
| Output data type | <input type="text" value="TEXT"/> |
| Example output   | 19/Mar/20 1:38 PM                 |

When cast to text, the output depends on the `jira.date.time.picker.java.format` parameter set in your Jira instance.

**19/Mar/20 1:38 PM** would be returned for `dd/MMM/yy h:mm a`

If you want to return a **number** (a timestamp) instead, **remove** the leading % character in front of the field code.

You will **not** be able to do this in the **basic mode**. Learn more about [Parsing modes](#).
