

List all issues with an inactive assignee and that were assigned by the current user

On this page

[Configuration](#) | [Screenshots](#) | [Related use cases](#)

Use case

Retrieve **all issues** which belong to the **projects PLAT and WEB**, whose **assignee is not active** anymore and in which the **current user was an assignee in the past**.

Configuration

Use the following JQL:

```
issue in issueSelection("project in (PLAT, WEB)", "!isActive(%{issue.assignee}) and %{system.currentUser} in fieldHistory(%{issue.assignee})")
```

Details to keep in mind

1

To set the **subquery**, it is recommended to test it beforehand in the issue navigator. The less issues returned by the subquery, the faster the function will be executed, so the more precise the subquery, the better.

2

To further refine the issues returned, the following functions are used:

- [isActive\(\)](#) to check whether the current assignee is an active user
- [fieldHistory\(\)](#) to query the field history of the assignee field
