

issueType()

This function returns the **name** of the **issue type** with a given **ID**

Syntax

issueType(id) #Output: Text

Examples

Parser expression	Description
<code>%{issueType(10000)}</code>	This example returns a text with the corresponding name of the issue type with the ID 10000 e.g. Task

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
id	<div>NUMBER</div>	A valid issue type ID.

Output

This function returns a

TEXT

If there is no issue type with the given ID, the function returns

NULL

Use this function to ensure expressions will continue to work after **renaming** resolutions:

Will continue to work after status name update	Will fail after status name update
<code>%{issue.issueType} = issueType(10000)</code>	<code>%{issue.issueType} = "Task"</code>
