

# JWT release notes 3.1.3

Release date	05 Jan 2022
Release type	<div>MAINTENANCE</div>
Highlights	Maintenance release

## Improvements

- Improved workflow error messages in various places
- Improved form validation when using [seed values](#) in the [expression editor](#)

## Bug fixes

- The rendering language was not set to system default on app installation
- Using special characters in workflow names could break some JWT forms
- The custom number format of [calculated number fields](#) did not align to the user's locale
- Insight object/s custom fields could not be updated by object key (only by object name)
- Several UI bug fixes
