First steps

On this page, you will find the very first steps you need to take to start using Smart Fields.

1

Install Smart Fields for Jira or ask your friendly Jira administrator to install it for you. Either directly from within Jira or from the Atlassian Marketplace.

Smart fields can **only** be created and configured by a Jira administrator.

2

Start creating and configuring your first Smart field by browsing to **Administration Issues Fields Custom Fields Create custom field**

Your browser does not support the HTML5 video element

3

Update the field layout of the issue view and include your newly created Smart field.

Your browser does not support the HTML5 video element

Pin the field or make it a **Description field** if it is important for users to see the field right away.

If you still have questions, feel free to refer to our support team.
