

# Update linked issue or sub-task (use cases)

The [Update linked issue or sub-task](#) post function is used to update **one** or **multiple issue fields** in **linked issues** or **sub-tasks**.

## Use cases and examples

Use case	JWT feature	Workflow function	Use case description	Complexity
<a href="#">Copy the due date from the current issue to blocking issues</a>		<a href="#">Update linked issue or sub-task</a>	Copy the <b>due date</b> value from the <b>current issue</b> to <b>blocking issues</b> .	BEGINNER
<a href="#">Set the fix version from the current sub-task for all sibling sub-tasks</a>		<a href="#">Update linked issue or sub-task</a>	Update the <b>fix version</b> of all <b>sibling sub-tasks</b> from the <b>current issue</b> .	BEGINNER
<a href="#">Update the sub-task's assignees by the current issue's value</a>		<a href="#">Update linked issue or sub-task</a>	Update the sub-task's <b>assignee</b> from its parent	BEGINNER
