_snip_fields_Cloud

Every supported field can either be set or cleared.

After selecting a field and clicking the **Add** button, you can select in the **popup** how to set the value. There are three or - when dealing with selectable fields - four options:

- Copy field from current issue
- Clear field value
- Set field value manually - Read more about the JWT expression editor
- The option **Selected value** is available for the following fields types:
    - Jira Software related fields like **Sprint** or **Epic**
    - User related fields like **Assignee** or **Reporter**
    - Version related fields like **Affects-** or **Fix version/s**
    - Component/s
    - Labels
    - Priority
    - Resolution
    - Security level
    - and all option based custom fields that are supported
