

Bulk delete pages

Delete multiple pages in a single go.

Your browser does not support the HTML5 video element

How to select multiple pages

Many of the actions you can perform on individual **pages** as **bulk actions**.

Simply browse to the [space navigator](#) and **select** multiple pages as if you were selecting multiple files in a file explorer.

- **Windows users:** hold the **CTRL** key and select the entities or select an entity and hold the **shift** key for faster multiple selections
- **Mac users:** hold the **command (cmd)** key and select the desired entities.

After selecting the pages, right-click on one of the selected items and you will see all available bulk actions.

Select a **single** page and **hold the shift key** while selecting another page for a quicker selection of all pages in between.

1

Right-click on the page selection or, **hover** over one of the selected pages and click on the **ellipsis** menu "..."

2

Select the **Bulk delete** action.

3

Optional: Choose to delete the desired pages **and** their **child pages**.

4

Click on **Delete**.

The pages will **not** be deleted right away. Instead they will be sent to the **trash** where they can be completely **purged** or **restored** by a space admin at any time.
