## **Bulk space actions**

Many of the actions you can perform on individual spaces, you can also perform on **multiple spaces at once** using **bulk actions**.

Simply browse to the space navigator and **select** multiple spaces as if you were selecting multiple files in a file explorer.

- Windows users: hold the CTRL key and select the entities
- Mac users: hold the command (cmd) key and select the desired entities.

After selecting the spaces, right-click on one of the selected items and you will see all available bulk actions.

Select a single space and hold the shift key while selecting another space for a quicker selection of all pages in between.
