

JWT release notes 3.1.6

Release date	20 Jun 2022
Release type	FEATURES
Highlights	Feature and maintenance release

New features

- Introducing the new [Reindex issue action](#) to be used in [automation rules](#)
- Added support for [Issue Picker custom fields](#) by [ScriptRunner](#)

Bug fixes

- User-related [JQL functions](#) did not work properly when having more than 1.000 users
- Referencing seed issues did not work properly in the [Create issue](#) post function since JWT 3.1.4
- The [issue selector](#) in [automation rules](#) did not work properly under certain circumstances
- Minor bug fixes related to the usage of [JWT calendars](#)
- The [Create issue](#) post function did not work properly when expressions used for summary or description returned null
- The [stringToDate\(\)](#) parser function used the system timezone instead of the Jira default timezone
- Minor bug fixes related to the [Configuration Manger for Jira \(CMJ\) support](#)
