

Migrate 'Compare two values validator'

The [Compare two values validator](#) of [JWT DC](#) is also available for [JWT Cloud](#).

Since JWT DC field codes are not available in conditions or validators in JWT Cloud, they have to be replaced by their Jira expression equivalent.

Migration steps

1

Add the [Compare two values validator](#).

2

Reconfigure the validator with the help of the following list, providing the necessary basics.

Right-hand side value

Comparison value

The following list presents the fields supported by the [Compare two values validator](#) in JWT Cloud. Fields not appearing in this list, cannot be mapped to JWT Cloud. All fields are available for the contexts "issue" and "parent".

Either a field can be selected or a value can be set manually. In JWT Cloud one of these options has to be selected first and then a field or a value by using the parser expression editor has to be provided.

Due to the different architecture, it may happen that the condition gets too complex. This is the case when many fields are checked. The condition cannot be saved, and a corresponding error message will be displayed. If that's the case, the condition has to be split up into two or more.

Validation options

This parameter is not available in JWT Cloud.

Error message

In JWT Cloud, only a fixed text without field codes or translations is supported.

If you still have questions, feel free to refer to our [support team](#).
