

Reorder workflow functions with drag and drop

On this page

[Drag and drop sorting](#) | [Group and ungroup conditions](#)

Reorder conditions, validators and post functions by activating the **Sort** function or even **move conditions to other groups**.

Drag and drop sorting

If you activate the **Sort** function you can quickly and easily **sort conditions** and **post functions via drag and drop**. You can even **move conditions to other groups**!

When you're done, click on the sort icon again to save the changes and return to normal edit mode.

Copy post function

ACMOON: Road Workflow Transition (ID)

The following will be processed after the transition occurs

- 1. Set issue status to the linked status of the destination workflow step.
- 2. Add a comment to an issue if one is entered during a transition.
- 3. Update change history for an issue and store the issue in the database.
- 4. Re-index an issue to keep indexes in sync with the database.
- 5. Fire a **Generic Event** event that can be processed by the listeners.

+ Add post function Sort

Group and ungroup conditions

Have you ever added a condition to the wrong group or forgotten to group conditions altogether? **Admin Toolbox for Jira** adds a **quick group function** to the workflow actions. If you click on the grouping icon the element will automatically be grouped with the element above.

If you made a mistake, simply use the **sort function** to update the grouping sequence.
