

Reorder project shortcuts with drag and drop

SINCE VERSION 2.12.0

Reorder project shortcuts in the expanded project sidebar using drag and drop ([JRASERVER-66193](#)).

On any project sidebar in the **project shortcuts** section, links can now be reordered as you like, as shown below:

The screenshot displays the Jira Workflow Toolbox interface. The top navigation bar includes the Decadis logo, 'xApps Jira', and various menu items like Dashboards, Categories, Projects, Issues, Boards, Plans, Insight, Charts, and a 'Create' button. The left sidebar, titled 'Jira Workflow Toolbox', lists several sections: JWT board, Backlog, Active sprints, Releases, Reports, Issues (highlighted), Components, Charts, Objects, and a 'PROJECT SHORTCUTS' section. The 'PROJECT SHORTCUTS' section contains links for Confluence Space, Trello Board, Atlas Project, and an 'Add link' button. The main content area shows a 'Google Maps location for an address' project. It includes a 'Details' section with fields for Type (Story), Priority (Highest), Status, Resolution, Fix Version/s, Affects Version/s, Component/s, Labels (MeetTheMonsters, ToolboxesForEveryNeed, xApps), Story Points (2), Epic Link (Another Epic), Sprint (Sample Sprint 2), Address (Decadis AG), and a Google Map (by JWT) showing the location of Decadis AG. The map includes a red pin and a label 'DECADIS AG' with a link to 'Größere Karte ansehen'.
