

# Action response

Read

Returned value	The stringified JSON body of a response which was returned from the action in the post function <a href="#">Execute remote action</a> . It is especially useful to write it to an Issue field and read it for further processing using the JWT parser function <a href="#">getFromJSON()</a> in another post function.
Output data type	<div>TEXT</div>
Example output	<pre>{"self": "https://your-domain.atlassian.net/jira/rest/api/3/project/10042", "id": 10010, "key": "PROJ"}</pre>
