

Transition an issue remote action

This action template provides the functionality to transition a Jira issue within a Jira Cloud or Jira on-prem instance.

Configuration

Issue key

The **Issue key** parameter defines the issue to be transitioned.

Transition ID

The **Transition ID** parameter defines the transition which will be executed. You can find the transitions under any view/edit workflow page.

Action-specific response options

This action template does not provide action-specific response options. But the **default options** like **Response body**, **Response status** or **Set field value manually** are available in any mode in the post function.

Use cases and examples

Use case	JWT feature	Workflow function	Parser functions	Label
Automatically create a version when starting the release		Execute remote action		
Automatically create a version when starting the release		Execute remote action		
Automatically link an issue to an external one		Execute remote action		
Automatically link an issue to an external one		Execute remote action
