

Create a personal space for a new employee

On this page

[Configuration](#) | [Related use cases](#)

Use case

In this use case, a dedicated ticket is created for a candidate during the onboarding process that follows the employment workflow. If both parts agree to work together, we will use this template to **create a space** in the **external Confluence instance** for the new employee.

Configuration

1

Add the [Execute remote action](#) **post function** to the desired transition or create a new transition.

2

Create remote action

Select the action to get started. Choose **Create a space**.

Based on the external Jira instance you can select either **Cloud** or **On-prem template**.

3

Select connection

Choose **an existing connection** to the external Confluence instance or create **a new connection**.

4

Customize your action

[Set action parameters](#)

*The values used below are created for the **example** only. Please **provide real input** from your instance for making the use case realistic.*

1

Space key

Set it manually using the expression editor as follows:

NEWEMPL

Space name

2

Set it manually using the expression editor as follows:

New employee

From the used **template**, you can retrieve the **Space ID** and/or the **Link to created space** and save them in any field. For this use case, we will save the **link to created space** in the **description** field.

Optionally, you can use the **Update issue fields (optional)** section to save the **response body** or **parts** of it into some field.

Update issue fields (optional)

1

Select the field to be set.

Choose **Description**.

2

Set the value.

Choose **Link to created space**.
