

Link a Jira issue with the corresponding release ticket

On this page

[Configuration](#) | [Related use cases](#)

Use case

This use case considers having a dedicated ticket for an upcoming release version. We will use this template to **link an issue** with the release ticket.

Configuration

1

Add the [Execute remote action](#) **post function** to the desired transition or create a new transition.

2

Create remote action

Select the action to get started. Choose **Link an issue**.

3

Select connection

Choose **an existing connection** to the current instance or create **a new connection**.

4

Customize your action

[Set action parameters](#)

*The values used below are created for the **example** only. Please **provide real input** from your instance for making the use case realistic.*

1

Link type name

Set it manually using the expression editor as follows:

Relates

2

Source issue key

Choose "Copy field value from current issue" and select **Issue key** as field. The link will start from the issue for which the transition is performed.

3

Target issue key

Set it manually using the expression editor by entering the **Issue key** of the respective release ticket:

Issue-2

Optionally, you can use the **Update issue fields (optional)** section to save the **response body** or **parts** of it into some field.
