

Create an issue with a custom summary

On this page

[Configuration](#) | [Related use cases](#)

Use case

In this use case, we will create an issue after executing a transition. The summary of this newly created issue will be set from the transition screen.

Configuration

1

Add a **screen** where you can change the summary of the current issue to the transition of your choice.

2

Add a **Create issue** post function to the **workflow transition** you where you added the screen.

3

Issues to be created

1

Mode

Choose **Single issue**

2

Issue type

Choose **Selected issue type** **Task**

Summary

Enter the following expression with parsing mode set to **Basic text**

`%{issue.summary}`

1

Add a [Update or copy field values](#) post function to the **same transition as the Create issue post function**.

This post function must be added after the Jira post function *Creates issue originally*, that is, in the second position.

2

Target issue

Choose **Current issue**

3

Field

Choose **Summary**

4

Value

In the **popup**, choose the value **Set field value manually (parser expression)**

5

Expression

Set the expression editor to **Advanced mode** and use the following expression:

```
previousValue(%{issue.summary})
```

6

User

Choose **Current user**
