

Halt a transition if an element is not contained in a list

On this page

[Configuration](#) | [Related use cases](#)

Use case

Some fields return a text with several elements in the form of a list. In this use case we will convert this text into a text list and compare it with as many elements as needed.

Configuration

1

Add the [Logical validator](#) to the desired workflow transition.

2

Expression

Add an expression following the next format:

```
toStringList(%{issue.components}) ~ ["Component 01", "Component 02"]
```

You can replace both the field code of the Components fields and the options between quotation marks and brackets with any custom field that returns a text and any text respectively.

3

Error message

Optionally, enter an error message as the following one.

```
Only issues with Component 01 and Component 02 can be transitioned.
```

Related use cases

Use case	JWT feature	Workflow function	Parser functions	Label
Block an Epic's transition depending on linked issues status and due date		Logical validator Logical condition	count() filterByPredicate() linkedIssues()	

Block an Epic's transition until all the issues under that Epic are resolved		Logical validator Logical condition	count() issuesUnderEpic() filterByResolution()	
Block a transition until all sub-tasks have certain fields populated	 	Logical validator Logical condition	count() filterByPredicate() subtasks()	STAFF PICK
Ensure that all issues linked with a certain issue link type have "Due Date" field set	 	Logical validator Logical condition	count() linkedIssues() fieldValue()	
Ensure that an issue has at least one attachment		Logical validator Logical condition		STAFF PICK
