

Link to the linked epic from the current issue

On this page

[Configuration](#) | [Related use cases](#)

Use case

Create a calculated text field that displays a link to the issue view of the epic linked to the current issue.

Configuration

1

Create a new **Calculated Text Field (by JWT)** custom field and name it properly.

Providing a description will help you to identify what the custom field does but this step is **optional**

2

Parsing mode

Set the **Parsing Mode** to **Advanced text**

3

Parser expression

Add the following expression:

```
#{10100} != null ?  
(toString(fieldValue(#{00028},issueKeysToIssueList(#{10100}))) = "" ? "<a href=\" + #{00169} +  
+ \"/browse/\" + #{10100} + \"\>\" + #{10100} + \"</a>\" : "<a href=\" + #{00169} + \"/browse/\" + #{  
{10100} + \"\><strike>\" + #{10100} + \"</strike></a>\" )  
: null
```

Please, replace `#{10100}` with the field code for the field **Epic Link** before testing the expression.

4

Add the field to the relevant view **screens**.

Remember: All calculated fields are read-only and cannot be manually updated on a create or edit screen.

Related use cases

Use case	JWT feature	Workflow function	Parser functions	Label
Check if an issue was resolved on time			datePart()	
Components from all sub-tasks			toString() distinct() fieldValue() subtasks()	
Details of the last comment				STAFF PICK
Difference between two dates in business days			formatWorkDuration() timeDifference()	
Display additional details of the issue creator				
Display current issue's project category				
Display historic due dates			toString() textOnNumberList() fieldHistory() dateToString()	
Display reporters of linked Cloud issues			executeRemoteAction() findPattern() toStringList() toString() distinct()	
Google Maps location			replaceAll() toLowerCase()	STAFF PICK
Highest ranked custom field value among all linked issues			first() sort() fieldValue() linkedIssues()	
Last comment, its author, and timestamp			userFullName() dateToString() last() allCommentDates()	STAFF PICK
Last commenter's full name			userFullName()	
Status and assignee of parent issue
