

Action response

Read

Returned value	The stringified JSON body of a response which was returned from the action in the post function Execute remote action . It is especially useful to write it to an Issue field and read it for further processing using the JWT parser function getFromJSON() in another post function.
Output data type	TEXT
Example output	<pre>{"self": "https://your-domain.atlassian.net/jira/rest/api/3/project/10042", "id": 10010, "key": "PROJ"}</pre>
