

Create a comment on an external Jira ticket

On this page

[Configuration](#) | [Related use cases](#)

Use case

For this use case we will consider having two Jira instances. On transition of a ticket in one of the instances, we want to write the **status of the transitioned issue** as a **comment** on the linked external ticket.

Configuration

1

Add the [Execute remote action](#) **post function** to the desired transition or create a new transition.

2

Create remote action

Select the action to get started. Choose **Create an issue comment**.

3

Select connection

Choose **an existing connection** to the external Jira instance or create **a new connection**.

4

Customize your action

[Set action parameters](#)

*The values used below are created for the **example** only. Please **provide real input** from your instance for making the use case realistic.*

1

Issue key

Set it manually using the expression editor as follows, assuming the external issue has the key ISSUE-1:

ISSUE-1

2

Comment text

Choose **Issue status**.

From the used template, you can retrieve the **Comment ID** and/or the **Comment author** and save them in any field.

Optionally, you can use the **Update issue fields (optional)** section to save the **response body** or **parts** of it into some field.

Related use cases

Use case	JWT feature	Workflow function	Parser functions	Label
Automatically create a version when starting the release		Execute remote action		
Automatically link an issue to an external one		Execute remote action		
Automatically log work on a Jira issue		Execute remote action	dateTimeToString()
