

Create an external link remote action

This action template provides the functionality to add an external link to an issue in a Jira Cloud or Jira on-prem instance.

Configuration

Issue key

The **Issue key** parameter defines the issue in which the external link should be created.

Link url

The **Link URL** parameter defines the URL to the external issue which shall be linked.

Link title

The **Link title** parameter defines the displayed title of the link in the issue.

Link type (optional)

The **Link type** parameter defines the type of the link to be created. You can set any descriptive text for the type of the link.

Action-specific response options

The response options define values which are taken from the rest response of the executed template.

Value	Description
Link ID	Returns the ID of the new link created by the action.

Other **default options** like **Response body**, **Response status** or **Set field value manually** are available in any mode in the post function.

Use cases and examples

Use case	JWT feature	Workflow function	Parser functions	Label
Automatically create a version when starting the release		Execute remote action		
Automatically link an issue to an external one		Execute remote action
